

Information on Directive 2011 / 65 / EU RoHS 2 (ElektroStoffV)

and Directive 2015 / 863 / EU

As a manufacturer and distributor of high-quality communications products for authorities, industry and trade, we are fully versed in the Directive on the restriction of the use of certain hazardous substances in electrical and electronic equipment.

CEOTRONICS monitors Directive 2011/65/EU (RoHS 2), which came into force on 21 July 2011, and Directive 2015/863/EU, which came into force on 24 June 2015, in order to provide necessary information within the supply chain.

CEOTRONICS is in close contact with its suppliers in order to monitor changes in the product status as well as changes to the RoHS Directive and its exceptions. The RoHS conformity status is regularly recorded and updated. CEOTRONICS endeavours to inform its valued customers timely about those changes that are sent to us by suppliers. This is intended to ensure that all products that fall within the scope of the RoHS Directive and are placed on the European market on or after 22 July 2019 are compliant with the stipulations of the RoHS Directive.

Please note that all information on the RoHS conformity of our communications products is based on information provided by the respective manufacturer of the purchased parts used.

We are not in possession of any complete material declarations for purchased parts that are used in the manufacture of our products. However, we can ensure that all legally required information that we receive from our suppliers will also be made available to you.

The information will be made available in good faith and without warranty.

Please note that due to our large number of products and purchased parts, we are unable to sign customer-specific questionnaires about contents or general confirmations of conformity. This applies in particular to inquiries that go beyond the scope of statutory requirements. However, we are pleased to confirm that CEOTRONICS always fully abides by all regulations, standards and laws that apply to CEOTRONICS in Germany and Europe.
